A report from the CDC (Centers for Disease Control) released on April 13th, states that a recent study found the new coronavirus can travel 13 feet through the air and be carried around on people’s shoes. While the CDC has not changed their official social distancing recommendation, this report just underscores the recommendation to stay at home unless it is necessary to go out for essential supplies.

To date, Big Sur Health Center is not aware of any confirmed cases of COVID-19 in Big Sur, we all need to assume it is here and act accordingly with social distancing (6’) precautions, frequent handwashing and limiting outings into public locations.
